SCOPICO

TECHNOLOGY LEADERSHIP & DELIVERY ADVISORY

Skopje, North Macedonia
Remote: US · UK · EU

Architect stronger systems. Lead teams that deliver.

Fractional CTO, technology advisory and custom development for founders and engineering organizations building new systems, strengthening architecture and scaling software delivery.

Senior direction, without a full-time hire.

From blank page to production: clarify architecture, team structure and the path to execution.

WHAT SCOPICO DELIVERS

01

Fractional CTO & technology advisory

Senior guidance on technology strategy, priorities and delivery decisions for founders and engineering leaders navigating growth or change.

02

Solution architecture & reviews

Architecture for systems built from scratch, plus independent reviews of structure, risk, scalability and modernization priorities.

03

Custom development

End-to-end build of a defined product or system: architecture, development, testing and handover, delivered to an agreed specification.

04

Dedicated development teams

Scopico assembles and leads vetted developers from a trusted professional network, with the structure, standards and delivery rhythm to execute reliably.

05

Development management & SDLC improvement

Improve planning, estimation, code review, QA, CI/CD, releases, team rituals and delivery metrics through diagnostics, fractional management or recovery leadership.

Custom development, contracted two ways only

Lump sum - fixed requirements

Custom development is priced as a lump sum against fixed requirements agreed in writing before the build starts. Changes to those requirements are re-scoped and re-priced before work on them begins.

Time & materials - established teams only

Time-and-materials development is offered only where a development team is established for the engagement and led by Scopico. It is not offered as open-ended solo hourly development.

Adopt AI-assisted development without losing control

Scopico helps engineering organizations integrate AI into how teams plan, code, review and deliver software. The focus is leadership and operating practice: useful context, clear standards, responsible review and team ownership - not building AI or machine-learning systems.

- GitHub Copilot
- Coding-agent adoption
- MCP context engineering
- Review & governance

Enterprise depth behind the advice

13+
years in software development

15,000
peak users on a load-balanced enterprise platform

6 + 2
developers and testers led

Global
multinational remote-team environments

Dev-lead proof: enterprise platform delivery at scale.
Enterprise stack: Azure, .NET Core, Angular and MSSQL.
Industry depth: banking, insurance, SCADA, telecom and automotive.

TECHNOLOGY STACK

Core stack - mainly Microsoft, current in production work

Custom development and architecture work is built mainly on Microsoft technologies, with the following as the core, most recent stack.

BUILD

- C#
- .NET / .NET Core
- ASP.NET Core
- TypeScript

CLOUD, DATA & OPERATIONS

- Microsoft Azure
- Microsoft SQL Server
- Redis
- Windows Server
- PowerShell

DELIVERY & COLLABORATION

- Azure DevOps
- GitHub (Copilot, Enterprise)
- TFS

Also in the toolbox

Additional technologies from across the delivery record, available where a project calls for them.

- Angular
- JavaScript
- HTML/CSS
- Java
- Go
- MySQL
- Oracle PL/SQL
- Apache Cordova
- Android

Ways to engage

FORMAT	BEST FOR	TERMS
Advisory session	Deciding a critical issue.	Single session
Architecture review	Exposing risk and modernization priorities.	Fixed-scope review
Fractional partnership	Ongoing senior technology direction.	Ongoing engagement
Custom development	Building a defined product or system end to end.	Lump sum, against fixed requirements only
Dedicated team	Assembling and leading a delivery team.	Time & materials available for established teams

Availability & conflict policy

Scopico serves US, UK and EU clients. To protect confidentiality and avoid conflicts, it accepts one active client per industry at a time. Consulting hours are Monday-Friday, 17:30-20:00 CET, with Saturdays by arrangement; full-time offshore or outsourced engagements may be considered.

How Scopico works

- Senior-led: architecture and delivery decisions are made by the founder, not handed off.
- Standards and review: clear standards, responsible review and team ownership on every engagement.
- Defined before build: custom development starts only once requirements are fixed and agreed in writing.
